

PROBLEM STATEMENT

Communication is the only medium by which we can share our thoughts or convey the message but for a person with disability (deaf and dumb) faces difficulty in communication with normal person. Generally dumb people use sign language for communication but they find difficulty in communicating with others who don't understand sign language. So there is a barrier in communication between these two communities.

1. Sam has difficulty in hearing. He uses sign language to communicate with others. But he can't able to communicate with normal people who don't understand sign language.
2. Manikandan is a dumb by birth. He uses sign language to communicate with others. But he can't able to communicate with normal people who don't understand sign language.
